7888 Ticket Printer

7888 Ticket Printer Meter Register and Ticket Printer combine to produce clean, detailed printed records of high-speed fluid deliveries and transactions.

Two models are available: Accumulative and Zero Start. The Accumulative Printer, before delivery, prints the total remaining from the previous delivery. After delivery, the total accumulated at that point is printed. The amount just delivered is found by subtracting the previous total from the accumulated total. Zero start models first print zeros. The total printed after delivery is the actual amount of the transaction.
